

Chapter 3

Implementation of multimedia content

Vicent Tortosa
Web Interface Desing

1. Inserting audio into a website

You are asked to create an html document to integrate it with your web page, created in the previous activity. In this new web-page you will integrate audio, it will be in three different ways:

- An audio tag with the default controls.
- Tag a for file download.
- Custom controls.

The images for the custom controls are attached to the course webpage. The theory to be able to develop the practice is in the theory pdf.

Obviously all new content will be adjusted to the responsive design of the website.

2. Embedding video in a website

You are asked to create an html document to integrate it o your web-page created in the previous activity. In this new web-page you will integrate video, it will be in two different ways:

- A video tag with the default controls.
- Iframe with Vimeo video <https://vimeo.com/108698417>

The necessary files are attached to the course web-page. The theory to be able to develop the practice is in the pdf of theory.

Obviously all new content will be adjusted to the responsive design of the website.
